Subject: Yucca Mountain Nuclear Waste Reserve - NO! NO! NO! NO! NO!

Federal Record Status Not Determined

To whom it may concern:

I am writing to oppose the DOE's plans to transport nuclear waste to Yucca Mountain for long-term storage. It is established that the site sits on or near a fault line that will be the site of a earthquake sometime in the future, and geologists have no idea when this earthquake will occur. They only know that at some time in the future, it will.

The other reason to oppose these plans is that the transportation of this waste over roads and rails represents an unacceptable public health hazard. Recent observations of high-level nuclear waste in transport from Germany to France indicated significant radiation increases along the route the waste traveled. The "radiation blooms" followed the waste as it traveled.

The storage of this waste should be the sole responsibility, financially and with regards to financial assurance against leaks and other accidents. It should not be funded with public money, and this significant public health

hazard is not acceptable. The nuclear power companies wanted to build nuclear power plants, and they should be responsible for their waste. Any other arrangement is a travesty of democracy and the free market system.

Yucca Mountain is nothing other than a giant corporate welfare scheme. Until these companies can learn how to clean up their mess, they should not be allowed to make a new one.

End the proposal to transport nuclear waste to Yucca Mountain immediately.
Thank You.
